

Andy's Photoshop Tip #16 - Embossing & Tiling a Logo

1

Create a new canvas & paste your existing logo or create one from scratch.

2

Now select **FILTER / STYLIZE / EMBOSS**. I entered the 2 for the height & 75 for the amount. Click OK. (Make sure that Monochrome is selected)

3

Now make the logo lighter or darker depending on what you want. I selected **IMAGE / ADJUST / LEVELS** and moved the bottom black triangle to 180 to make it lighter.

4

If you want to add a little grain to the logo select **FILTER / NOISE / ADD NOISE**. I typed in 5 for the amount.

5

Now select all (**CTRL+A**) and copy it (**CTRL+C**). Now choose **FILTER / OTHER / OFFSET** and enter in half of the width. $80 / 2 = 40$ pixels. Now select wrap around and hit Ok.

6

Now double your canvas size (**IMAGE / CANVAS SIZE**) and click on the bottom middle square and then Ok. Next, paste (**CTRL+V**) your other image above your split image.

7

To make your logo a certain color go to **Hue/Saturation (CTRL+U)** and play with the slider bars. I checked on colorize, Hue = -150, Lightness = 50. After a bit of playing you are ready to save your image.

Now look at the completed background.
