

### Andy's Photoshop Tip #27 - Image Transition Animation

**1** Open up your first image.

**2** Open up your second image and paste it as a new layer on top of your first. Now you can save this image by exporting this image. FILE...EXPORT...GIF 89 EXPORT...SAVE.

**3** Now adjust the opacity sliderbar on the top layer to 90%.

This lets a tiny bit of the bottom image to show through. Now you can save this image by exporting it. FILE...EXPORT...GIF 89 EXPORT...SAVE.

**4** Continue moving the opacity sliderbar down to 0 saving in even increments. I saved every 10. So, I saved at 100,90,80,70...10,0.

**5** After you have saved each frame, import your frames into an animation program (I used Gif Construction Set) and create a simple animation. Start with the first frame and go to the last. To fade back to the original picture, reverse your images. For a complete tip on using Gif Construction Set, go to my [tutorial](#).
